# 8.ROS命令行工具的使用

---

主讲人：古月

## 常用命令

- rostopic
- rosservice
- rosnode
- rosparam
- rosmmsg
- rossrv

### WORKSPACES

#### Create Workspace

```
mkdir catkin_ws && cd catkin_ws
wstool init src
catkin_make
source devel/setup.bash
```

#### Add Repo to Workspace

```
roscd; cd ../src
wstool set repo_name \
--git http://github.com/org/repo_name.git \
--version=kinetic-devel
wstool up
```

#### Resolve Dependencies in Workspace

```
sudo rosdep init # only once
rosdep update
rosdep install --from-paths src --ignore-src \
--rosdistro=${ROS_DISTRO} -y
```

### PACKAGES

#### Create a Package

```
catkin_create_pkg package_name [dependencies ...]
```

#### Package Folders

include/package_name	C++ header files
src	Source files.
	Python libraries in subdirectories
scripts	Python nodes and scripts
msg, srv, action	Message, Service, and Action definitions

#### Release Repo Packages

```
catkin_generate_changelog
# review & commit changelogs
catkin_prepare_release
bloom-release --track kinetic --ros-distro kinetic repo_name
```

#### Reminders

- Testable logic
- Publish diagnostics
- Desktop dependencies in a separate package

### CMakeLists.txt

#### Skeleton

```
cmake_minimum_required(VERSION 2.8.3)
project(package_name)
find_package(catkin REQUIRED)
catkin_package()
```

#### Package Dependencies

To use headers or libraries in a package, or to use a package's exported CMake macros, express a build-time dependency:

```
find_package(catkin REQUIRED COMPONENTS roscpp)
```

Tell dependent packages what headers or libraries to pull in when your package is declared as a catkin component:

```
catkin_package(
  INCLUDE_DIRS include
  LIBRARIES ${PROJECT_NAME}
  CATKIN_DEPENDS roscpp)
```

Note that any packages listed as CATKIN\_DEPENDS dependencies must also be declared as a <run\_depend> in package.xml.

#### Messages, Services

These go after find\_package(), but before catkin\_package().  
Example:

```
find_package(catkin REQUIRED COMPONENTS message_generation
std_msgs)
add_message_files(FILES MyMessage.msg)
add_service_files(FILES MyService.msg)
generate_messages(DEPENDENCIES std_msgs)
catkin_package(CATKIN_DEPENDS message_runtime std_msgs)ww
```

#### Build Libraries, Executables

Goes after the catkin\_package() call.  
add\_library(\${PROJECT\_NAME} src/main)  
add\_executable(\${PROJECT\_NAME}\_node src/main)  
target\_link\_libraries(  
 \${PROJECT\_NAME}\_node \${catkin\_LIBRARIES})

#### Installation

```
install(TARGETS ${PROJECT_NAME}
  DESTINATION ${CATKIN_PACKAGE_LIB_DESTINATION})
install(TARGETS ${PROJECT_NAME}_node
  DESTINATION ${CATKIN_PACKAGE_BIN_DESTINATION})
install(PROGRAMS scripts/myscript
  DESTINATION ${CATKIN_PACKAGE_BIN_DESTINATION})
install(DIRECTORY launch
  DESTINATION ${CATKIN_PACKAGE_SHARE_DESTINATION})
```

### RUNNING SYSTEM

Run ROS using plain:  
roscore

Alternatively, roslaunch will run its own roscore automatically if it can't find one:  
roslaunch my\_package package\_launchfile.launch

Suppress this behaviour with the --wait flag.

#### Nodes, Topics, Messages

```
roscd; cd ../src
rostopic list
rostopic echo cmd_vel
rostopic hz cmd_vel
rostopic info cmd_vel
rosmmsg show geometry_msgs/Twist
```

#### Remote Connection

Master's ROS environment:

- ROS\_IP or ROS\_HOSTNAME set to this machine's network address.
- ROS\_MASTER\_URI set to URI containing that IP or hostname.

Your environment:

- ROS\_IP or ROS\_HOSTNAME set to your machine's network address.
- ROS\_MASTER\_URI set to the URI from the master.

To debug, check ping from each side to the other; run roswtf on each side.

#### ROS Console

Adjust using rqt\_logger\_level and monitor via rqt\_console. To enable debug output across sessions, edit the \$HOME/.ros/config/rosconsole.config and add a line for your package:  
log4j.logger.\${ros.package\_name}=DEBUG

And then add the following to your session:

```
export ROS_CONSOLE_CONFIG_FILE=$HOME/.ros/config/rosconsole.config
```

Use the roslaunch --screen flag to force all node output to the screen, as if each declared <node> had the output="screen" attribute.

- 以小海龟为例

启动ROS Master

```
$ roscore
```

启动小海龟仿真器

```
$ rosrun turtlesim turtlesim_node
```

启动海龟控制节点

```
$ rosrun turtlesim turtle_teleop_key
```

小海龟仿真器界面

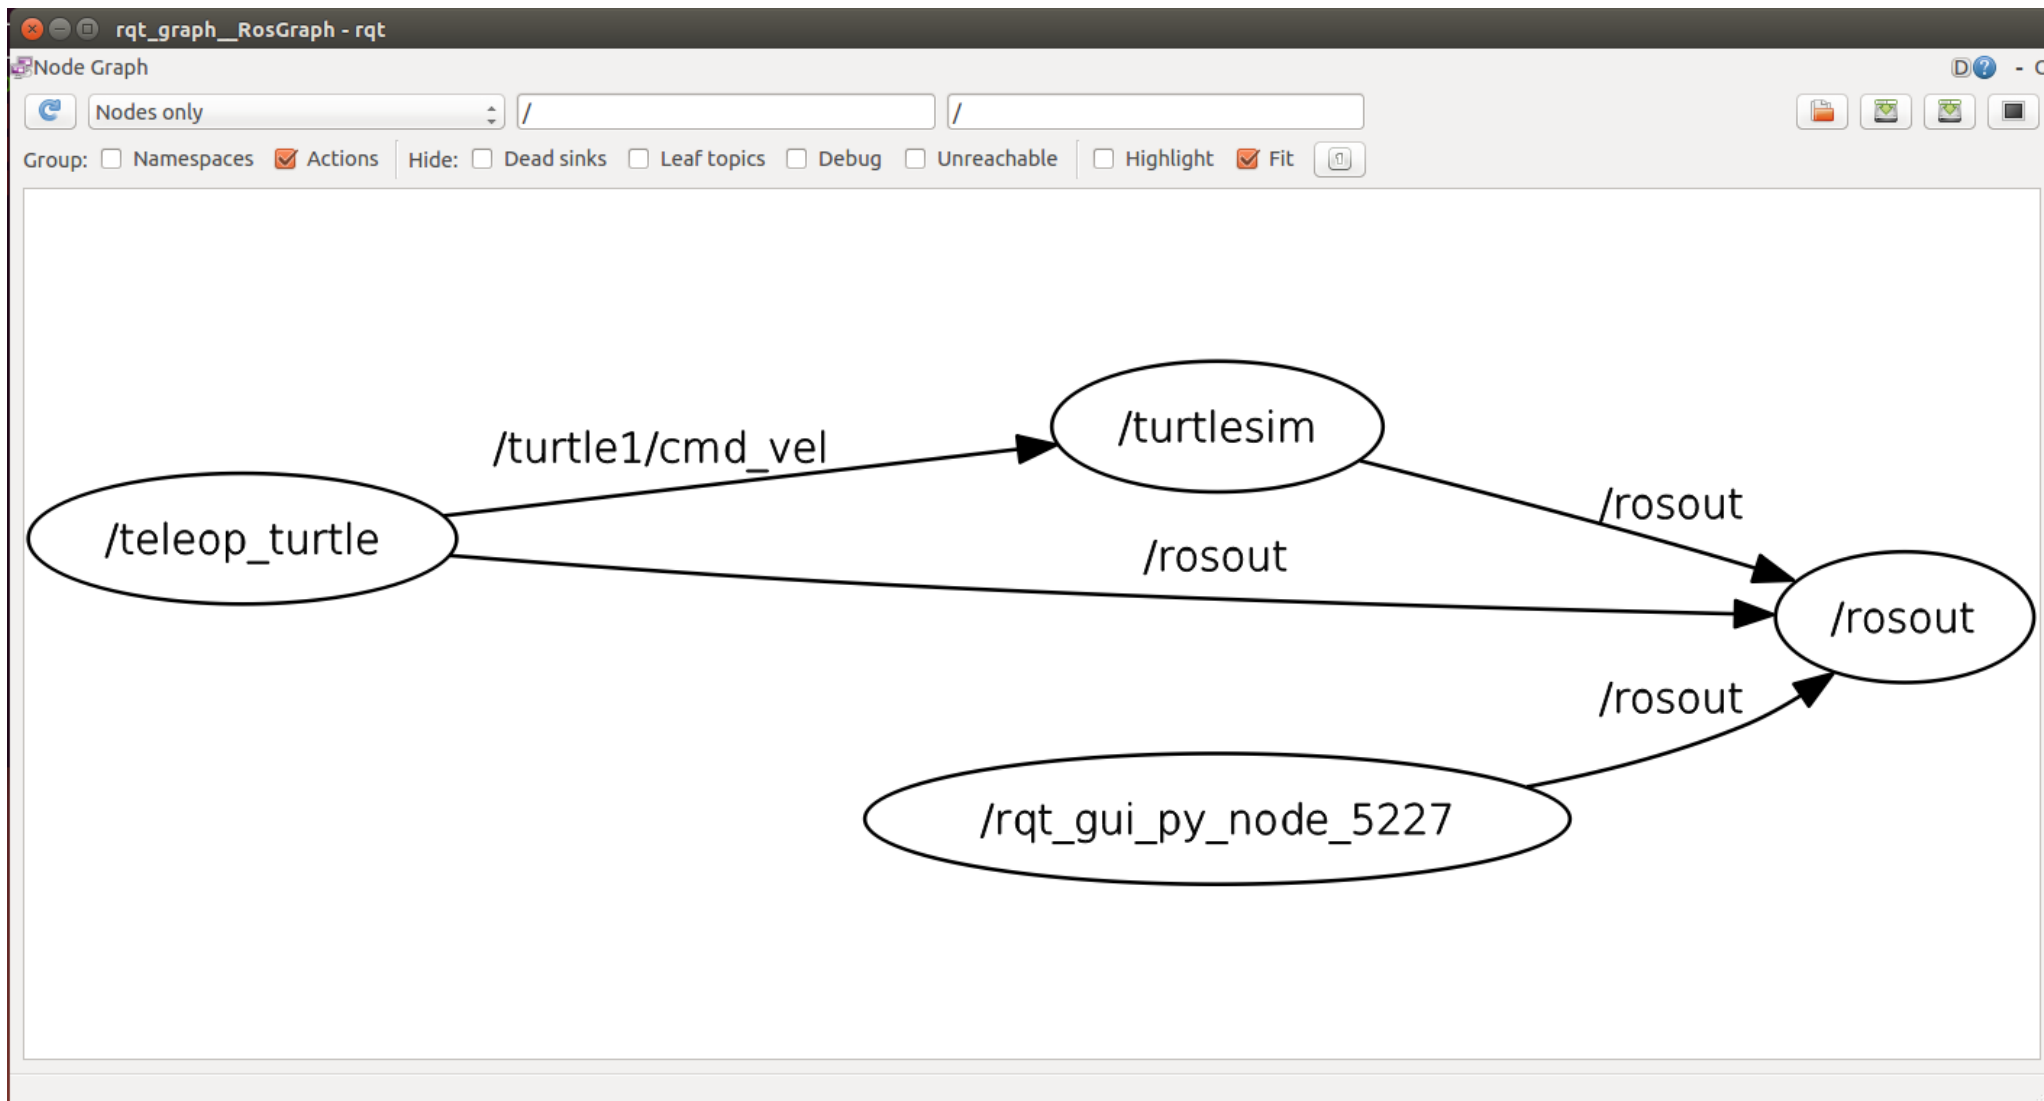

```
hcx@hcx-vpc:~$ rosrun turtlesim turtlesim_node
[ INFO] [1561200736.947992315]: Starting turtlesim with node name /turtlesim
[ INFO] [1561200736.954437402]: Spawning turtle [turtle1] at x=[5.544445], y=[5.544445], theta=[0.000000]
```

启动海龟仿真器节点

```
hcx@hcx-vpc:~$ rosrun turtlesim turtle_teleop_key
Reading from keyboard
-----
Use arrow keys to move the turtle.
```

启动海龟控制节点

- 以小海龟为例

使用rqt\_graph可视化工具查看系统中运行的计算图

## 查看话题列表

```
$ rostopic list
```

## 发布话题消息

```
$ rostopic pub -r 10 /turtle1/cmd_vel geometry_msgs/Twist "linear:  
  x: 1.0  
  y: 0.0  
  z: 0.0  
angular:  
  x: 0.0  
  y: 0.0  
  z: 0.0"
```

## 发布服务请求

```
$ rosservice call /spawn "x: 5.0  
y: 5.0  
theta: 0.0  
name: 'turtle2'"
```

- 以小海龟为例

话题记录

```
$ rosbag record -a -O cmd_record
```

话题复现

```
$ rosbag play cmd_record.bag
```

```
hcx@hcx-vpc:~$ rosbag record -a -O cmd_record
[ INFO] [1562832989.601585958]: Subscribing to /turtle1/color_sensor
[ INFO] [1562832989.602647996]: Recording to cmd_record.bag.
[ INFO] [1562832989.605538325]: Subscribing to /turtle1/cmd_vel
[ INFO] [1562832989.608421198]: Subscribing to /rosout
[ INFO] [1562832989.611259134]: Subscribing to /rosout_agg
[ INFO] [1562832989.614049029]: Subscribing to /turtle1/pose
^Chcx@hcx-vpc:~$ ^C
hcx@hcx-vpc:~$ rosbag play cmd_record.bag
[ INFO] [1562833040.748840302]: Opening cmd_record.bag

Waiting 0.2 seconds after advertising topics... done.

Hit space to toggle paused, or 's' to step.
[RUNNING] Bag Time: 1562832989.617591 Duration: 0.000000 / 23.940571
[RUNNING] Bag Time: 1562832989.618096 Duration: 0.000505 / 23.940571
[RUNNING] Bag Time: 1562832989.718480 Duration: 0.100890 / 23.940571
